Re: Unity Developer

Dear Hiring Manager,

I am writing to apply for the Unity Developer position at ATS. With over five years of hands-on experience developing Unity applications and a strong foundation in C#, I am excited by the opportunity to contribute to a team focused on building advanced tools for engineering and design workflows.

My experience includes developing cross-platform Unity applications, implementing UI systems, scene management, and persistent data handling, as well as building and deploying projects for Android and PC environments. I have worked across the full development lifecycle, from concept and feature design to implementation and testing while maintaining clean, maintainable code. I have also worked with multiple programming languages and have built a variety of interactive applications and games, which has strengthened my ability to adapt quickly and solve technical challenges efficiently. I am comfortable working in collaborative environments and contributing to shared codebases, using version control and structured workflows. These are all skills and qualities that are required for the position I am applying for.

I believe in leveraging technology to solve complex real-world problems which is the focus at ATS. Furthermore, I am self-motivated, open to learning new skills and have a high sense of ethics which makes me a good fit in your organization. I would welcome the opportunity to discuss how I can contribute to your team. Please connect with me via shadernyk@proton.me or call 647-464-8991 to schedule an interview. I look forward to hearing from you.

Thank you for your time and consideration.

Sincerely,
Shawn Nykwist
