UNITY DEVELOPER

PROFESSIONAL SUMMARY

Unity developer and coder, proficient in many languages including C#, Java, JavaScript, Python, C++, HTML, CSS, PHP and ActionScript., and skills pertaining to the development of 2D characters, 3D models, apps and games for PC, Android and WebGL

EDUCATION

Diploma in Game Design, International Academy of Design and Technology
(Coding, Animation, 3D modeling and Sound Design)

PROFESSIONAL DEVELOPMENT

- Certificate in Python Programming, George Brown College
- Certificate in Unity 2D & 3D Programming, George Brown College
- Certificate in .Net Programming, George Brown College
- Certificate in Android Application Development, George Brown College
- JAVA Basics, Seneca College
- Certificate in IOS Application Development, Seneca College

SUMMARY OF SKILLS

- 5+ years of Unity development experience with Render pipelines, asset bundles, Unity Library, Scene Management, Ui systems.
- Programming experience: C#, Java, JavaScript, Python, C++, PHP, HTML
- Version Control knowledge: Git (GitFlow)
- Web/Networking: REST APIs, JSON
- Creative and dedicated to innovation, exposition and effortlessly resolving project issues
- Sound design experience, comfortable using Logic, Pro-Tools, and others. (musical background)
- Excellent communication skills, written and verbal.
- Interpersonal skills - team player, dependable, able to work with minimal supervision and collaboration with others.
- Detail oriented – minimizing errors. maintaining accuracy
- Time management – organizing files for easy access, multi-tasking and ability to meet deadlines.
- Committed to staying current on industry best practice, trends, new technologies and platforms.

PROFESSIONAL EXPERIENCE

- Developed cross-platform Unity applications using C#, implementing persistent data storage, responsive UI systems, and scene management
- Designed and implemented application features from concept to deployment, following structured development workflows
- Integrated JSON-based data handling and external data sources within Unity applications
- Built a first-person 3D adventure game using Unreal Engine, focusing on gameplay systems, level design, and performance optimization

PROFESSIONAL EXPERIENCE CONTINUED...

- Developed an Android shopping list application in Unity, implementing UI systems, data persistence, and mobile deployment workflows
- Recreated classic Atari-style games (Tank Combat, Centipede) using Java and Eclipse, focusing on game logic, collision systems, and performance
- Built a 2-player Space Invaders-style Android game using Android Studio, implementing player input systems, enemy AI behavior, and scoring systems

ActionScript Developer. MUMU CREW GAMES

- Collaborated within a team of 4 developers to design and deliver browser-based games for PC and web platforms
- Contributed to gameplay feature development, debugging, and iterative improvements in a team environment

Lead Audio Designer (Project)— Half-Life Mod (25-person team)

- Led audio design and implementation for a large-scale team project, collaborating across disciplines to meet production goals
- Recorded and edited voice and sound assets, ensuring technical compliance with engine requirements (format, timing, quality)
- Managed audio asset pipeline and integration into the game environment
